SECTION 2: DEVELOPING FUN SPACE GAMES

---

1. Option 1: Mtr1: **Visual Explorer - to use**

Practical session from NASA JPL

THE Material outlines how to create a rover that explorer Mars planet using the SCRATCH tool

They will engage in computational thinking, use math and include elements of real rover-mission planning to design their game.

The whole procedure is here:

https://www.jpl.nasa.gov/edu/resources/lesson-plan/explore-mars-with-scratch/

- Mars surface images – surface images
- Mars rover sprite image – rover sprite
- Moon surface images – moon surface
- Moon rover sprite image – Moon rover sprite image

This material has sections from 1-6

---

2. Option 2: Mtr2: **medium Programmer**

Using python pygame with pygame zero but uses space adventure games

https://www.sean.co.uk/books/mission-python/index.shtm

Documentation of pygame zero can be found here:
https://pygame-zero.readthedocs.io/en/stable/introduction.html

Download the Mission Python PDF sampler

Take a look at Mission Python with this free PDF sampler. It includes the Introduction which shows you how to install the required software and provides instructions for playing the space adventure game, called Escape. It also includes Chapter 1, so you can get your first taste of programming using Python and Pygame Zero, creating a simple spacewalk simulator.

See my blog post: Three reasons to download the free PDF sampler of Mission Python
